

Synergy™ keeping the fish on ice in Russia

Cold Trade Ltd of St Petersburg, recently approached Fairford to help overcome a challenge posed by one of their clients.

A fish production factory in Russia were using large refrigeration plants to freeze the fish that had been processed within the factory. The challenge posed to Cold Trade was to install a refrigeration plant with the lowest starting current possible.

Denis Bobin, a controls engineer, with Cold Trade worked with Fairford to specify a suitable soft starter for

this application. Fairford supplied Cold Trade with two 280kW synergy™ units for use on the 250kW cooling compressors with Semi-Conductor fuses.

Using Fairford's 3.5" touch screen, automatic application set-up and automatic features, the two SGY-401 units were installed and commissioned quickly and efficiently.

Denis chose to work with Fairford on this application for reasons including, their past experience in these applications, the technical support offered, good delivery time and ease of set up and installation.

"The synergy units from Fairford are the best decision for use in open screw compressor units. The option of fast acting semi-conductor fuses gives a high level of protection." Denis Bobin, Controls Engineer, Cold Trade Ltd.

The automatic set-up and automatic features offered by Fairford soft starters allow the user to commission the synergy™ units in a matter of minutes. The automatic features modify the start and stop ramps to ensure that the optimum settings are always selected to give the smoothest possible start (or stop).

Alongside these features synergy™ also boasts, iERS Energy Saving, Live Monitoring, Full Log File recording function and software upgradeable in the field.

For more information on synergy™ contact Fairford.
